Västerås has 130 000 inhabitants.
It is the seventh largest town in Sweden.

In Västerås we've got these two small hotels. One is under the water and the other is high up in a tree. A third is being planned. It will be on...

...the moon! It will put Västerås on the map... It's called "Luna Resort".

Ekbergaskolan means "Oakhill School" in English.

We have got 245 students from the age of 6 up to 12 year olds.

The children who participate in the Comenius project from Ekbergaskolan are from the ages 9 up to 12 years old.

Our school is situated in the eastern part of the town. We have beautiful surroundings with lots of green spaces for the children to play in.

Winteractivities

Near Ekbergaskolan we have the
oldest royal burial site in Sweden,
Anundshög.

We visit Anundshög with our students. This was the site of a district court and the royal tour of the country passed through here during the early Middle Ages. The rune stone stands to show us where the road once passed.

Project "Lego League" for our oldest students

They work with programming a robot made of lego and with finding solutions to the global warming.

The older students work together with the younger students.

From the age of 9
the students
have sewing and
woodwork
classes.

One part of the school is for allergic children.

That is all for now!
